Deductions After Tax Reform

A Parent-Child Conversation About College Costs

The Standard Deduction and Itemized

The Tax Cuts and Jobs Act, signed into law in December 2017, substantially increased the standard deduction amounts and made significant changes to itemized deductions, generally starting in 2018. After 2025, these provisions revert to pre-2018 law.

The Standard Deduction and Itemized Deductions After Tax Reform

The Tax Cut and Jobs Act substantially increased the standard deduction amounts for 2018 to 2025. It also eliminated or restricted many itemized deductions for those years. You can generally choose to take the standard deduction or to itemize deductions. As a result of the changes, far fewer taxpayers will be able to reduce their taxes by itemizing deductions.

Standard deduction

The standard deduction amounts are substantially increased in 2018 (and adjusted for inflation in future years).

	2017	2018
Single	\$6,350	\$12,000
Head of household	\$9,350	\$18,000
Married filing jointly	\$12,700	\$24,000
Married filing separately	\$6,350	\$12,000

Note: The additional standard deduction amount for the blind or aged (age 65 or older) in 2018 is \$1,600 (up from \$1,550 in 2017) for single/head of household or \$1,300 (up from \$1,250 in 2017) for all other filing statuses. Special rules apply if you can be claimed as a dependent by another taxpayer.

Itemized deductions

Many itemized deductions have been eliminated or restricted. The overall limitation on itemized deductions based on the amount of adjusted gross income (AGI) was eliminated. Here are some specific changes.

Medical expenses: The AGI threshold for deducting unreimbursed medical expenses was reduced from 10% to 7.5% for 2017 and 2018, after which it returns to 10%. This same threshold applies for alternative minimum tax purposes.

State and local taxes: Individuals are able to claim an itemized deduction of up to only \$10,000 (\$5,000 for married filing separately) for state and local property taxes and state and local income taxes (or sales taxes in lieu of income taxes). Previously, there were no dollar limits.

Home mortgage interest: Individuals can deduct mortgage interest on no more than \$750,000 (\$375,000 for married filing separately) of qualifying mortgage debt. For mortgage debt incurred before December 16, 2017, the prior \$1,000,000 (\$500,000 for married filing separately) limit will continue to apply. A deduction is no longer allowed for

interest on home equity indebtedness. Home equity used to substantially improve your home is not treated as home equity indebtedness and can still qualify for the interest deduction.

Charitable gifts: The top percentage limit for deducting charitable contributions is increased from 50% of AGI to 60% of AGI for certain cash gifts.

Casualty and theft losses: The deduction for personal casualty and theft losses is eliminated, except for casualty losses attributable to a federally declared disaster.

Miscellaneous itemized deductions:

Previously deductible miscellaneous expenses subject to the 2% floor, including tax preparation expenses and unreimbursed employee business expenses, are no longer deductible.

Alternative minimum tax (AMT)

The standard deduction is not available for AMT purposes. Nor is the itemized deduction for state and local taxes available for AMT purposes. If you are subject to the alternative minimum tax, it may be useful to itemize deductions even if itemized deductions are less than the standard deduction amount.

Year-end tax planning

Typically, you have a certain amount of control over the timing of income and expenses. You generally want to time your recognition of income so that it will be taxed at the lowest rate possible, and time your deductible expenses so they can be claimed in years when you are in a higher tax bracket.

With the substantially higher standard deduction amounts and the changes to itemized deductions, it may be especially useful to bunch itemized deductions in certain years; for example, when they would exceed the standard deduction. Thus, while this might seem counterintuitive from a nontax perspective, it may be useful to make charitable gifts in years in which you have high medical expenses or casualty losses.

In this environment, qualified charitable distributions (QCDs) may be even more useful as a way to make charitable gifts without itemizing deductions. QCDs are distributions made directly from an IRA to a qualified charity. Such distributions may be excluded from income and count toward satisfying any required minimum distributions (RMDs) you would otherwise have to receive from your IRA. Individuals age 70½ and older can make up to \$100,000 in QCDs per year.

A weighty decision

Most teens are not financially experienced enough to drive a \$100,000 or \$200,000 decision, especially one that has the potential to impact them for most or all of their 20s or longer. So parent guidance is critical.

A Parent-Child Conversation About College Costs

If you're the parent of a high school student who's looking ahead to college, it's important to have a grown-up conversation with your child about college costs. A frank discussion can help both of you get on the same page, optimize the college search process, and avoid getting blindsided by large college bills.

An initial conversation: a, b, and c

As a parent, you need to take the lead in this conversation because most 16-, 17-, and 18-year-olds are not financially experienced enough to drive a \$100,000 or \$200,000 decision. One approach is to start off saying something like: "We will have saved 'a' when it's time for you to start college, and after that we should be able to contribute 'b' each year, and we expect you to contribute 'c' each year." That will give you a baseline of affordability when you start targeting colleges.

A more in-depth conversation: borrow x, pay back y

Once you start looking at colleges, you'll see that prices vary, sometimes significantly. If a college costs more than a + b + c above, you'll have to fill the gap. The best way to try and do this is with college grants or scholarships (more on that in a minute). Absent grant aid, you'll need to consider loans. And here is where you should have a more detailed conversation with your child in which you say: "If you borrow 'x' you will need to pay back 'y' each month after graduation." Otherwise, random loan figures probably won't mean much to a teenager.

You can use an online calculator to show your child *exactly* what different loan amounts will cost each month over a standard 10-year repayment term. For example, if College 1 will require your child to borrow a total of \$16,000 at 5%, that will cost \$170 each month for 10 years. If College 2 requires \$24,000 in loans, that will cost \$255 each month. A loan amount of \$36,000 for College 3 will cost \$382 per month, and \$50,000 for College 4 will cost \$530 a month, and so on. The idea is to take an abstract loan amount and translate it into a month-to-month reality.

But don't stop there. Put that monthly loan payment into a larger context by reminding your child about other financial obligations he or she will have after college, such as a cell phone bill, food, rent, utilities, car insurance. For example, you might say: "If you attend College 3 and have a student loan payment of \$382 every month, you'll also need to budget \$40 a month for your phone, \$75 for car insurance, \$400 for food..." and so on. The goal is to help your child understand the cost of real-world expenses and

the long-term financial impact of choosing a more expensive college that will require more loans.

Even with a detailed discussion, though, many teenagers may not be able to grasp how their future lives will be impacted by student loans. Ultimately, it's up to you — as a parent — to help your child avoid going into too much debt. How much is too much? The answer is different for every family. One frequently stated guideline is for students to borrow no more than what they expect to earn in their first year out of college. But this amount may be too high if assumptions about future earnings don't pan out.

To build in room for the unexpected, a safer approach might be to borrow no more than the federal government's Direct Loan limit, which is currently a total of \$27,000 for four years of college (\$5,500 freshman year, \$6,500 sophomore year, and \$7,500 junior and senior years). Federal loans are generally preferable to private loans because they come with an income-based repayment option down the road that links a borrower's monthly payment to earned income if certain requirements are met. Whatever loan amount you settle on as being within your range, before committing to a college, your child should understand the total amount of borrowing required and the resulting monthly payment after graduation. In this way, you and your child can make an informed financial decision.

If there's any silver lining here, it's that parents believe their children may get more out of college when they are at least partly responsible for its costs, as opposed to having a blank check mentality. Being on the hook financially, even for just a small amount, may encourage your child to choose courses carefully, hit the books sufficiently, and live more frugally. Later, if you have the resources, you can always help your child repay his or her student loans.

Target the right colleges

To reduce the need to borrow, spend time researching colleges that offer grants to students whose academic profile your child matches. Colleges differ in their aid generosity. You can use a net price calculator — available on every college website — to get an estimate of how much grant aid your child can expect at different colleges. For example, one college may have a sticker price of \$62,000 but might routinely offer \$30,000 in grant aid, resulting in an out-of-pocket cost of \$32,000. Another college might cost \$40,000 but offer only \$5,000 in grant aid, resulting in a higher \$35,000 out-of-pocket cost.

How does working affect Social Security retirement benefits?

If you're thinking about working as long as possible to increase your retirement savings, you may be

wondering whether you can receive Social Security retirement benefits while you're still employed. The answer is yes. But depending on your age, earnings from work may affect the amount of your Social Security benefit.

If you're younger than full retirement age and make more than the annual earnings limit (\$17,040 in 2018), part of your benefits will be withheld, reducing the amount you receive from Social Security. If you're under full retirement age for the entire year, \$1 is deducted from your benefit for every \$2 you earn above the annual limit.

In the year you reach full retirement age, \$1 is deducted from your benefit for every \$3 you earn above a different limit (\$45,360 in 2018).

Starting with the month you reach full retirement age, your benefit won't be reduced, no matter how much you earn.

Earnings that count toward these limits are wages from a job or net earnings from

self-employment. Pensions, annuities, investment income, interest, and veterans or other government benefits do not count. Employee contributions to a pension or a retirement plan do count if the amount is included in your gross wages.

The Social Security Administration (SSA) may begin to withhold the required amount, up to your whole monthly benefit, as soon as it determines you are on track to surpass the annual limit. However, even if your benefits are reduced, you'll receive a higher monthly benefit at full retirement age, because the SSA will recalculate your benefit and give you credit for any earnings withheld earlier. So the effect that working has on your benefits is only temporary, and your earnings may actually increase your benefit later.

These are just the basics, and other rules may apply. The Retirement Earnings Test Calculator, available at the Social Security website, ssa.gov, can help you estimate how earnings before full retirement age might affect your benefit.
